

BookKaroyar

Plan Together. Book Together. Split Effortlessly.

For trips, movies, dinners and every plan in between — built for friends, teams and modern work.

BOOKKAROYAR

*Good Plans
Better People.*

MORE PLANS
LESS CHAOS

-  Trips
-  Movie Nights
-  Dinners
-  Experiences
-  Split Expenses

Desktop Dashboard

A clean mobile and desktop experience for your plans.

UI DESIGN REFERENCE / V2

A punchy, contemporary SaaS experience for corporate friends and groups - built around plans, bookings, shared expenses and real-time coordination.

Tablet View – Group Overview

Perfect for planning on the go, with all details at a glance.

Mobile App – On the Go

Clean, fast and intuitive mobile experience.

Shareable Invite Page

A beautiful branded invite experience.

Expenses Section

Beautiful summaries with clear your balance.

Plan + Itinerary

Visually engaging itineraries with flexibility.

Booking Details

Clean and modern booking cards.

Settlement View

Smart and simplified settlement.

BookKaroyar

Plan Together. Book Together. Split Effortlessly.

PLAN. BOOK. SPLIT.

React + JavaScript + Firebase + MUI

*Good Food
Great Company*

VISUAL SOURCE OF TRUTH

*Made for
Modern Friends*

Not a generic dashboard. A social SaaS product with attitude.

The visual language should feel premium, warm, editorial and energetic - closer to a modern lifestyle product than a blue enterprise admin panel.

LAYOUT RULES

- 01 Use 1 strong visual anchor per page.
- 02 Let cards overlap or break the grid subtly.
- 03 Prefer dark surfaces + warm accents over white-on-white.
- 04 Use editorial headlines and short copy.
- 05 Show real people, plans and context - not abstract metrics.

COMPONENT CHARACTER

Pill CTAs

Soft status chips

Featured cards

Context images

Avatars + microcopy

Typography

Inter / bold headers / compact labels

Optional display accent: condensed heavy sans for hero statements.

Dashboard = command center, not analytics wallpaper.

Desktop has the highest information density: sidebar, upcoming plans, money summary, recent activity and one strong promotional action.

Tablet = contextual workspace. Mobile = fast actions + vertical story.

Do not simply shrink desktop. Navigation, density, and CTA placement change by breakpoint.

MOBILE RULES

Bottom navigation, not sidebar.

Primary CTA sits one thumb away.

One major action per screen.

Cards become stacked stories.

Keep labels short; let imagery do work.

+ Add Expense

The invite page should feel like a landing page - not a database record.

This is a social moment. Use a full-bleed visual, group context, and one obvious join action.

INVITE PAGE

“Come with us.”

A person should understand the trip, the people, the dates and the social proof before clicking Join.

PLAN	Goa Trip 2026
DATES	Oct 18 - Oct 21
PEOPLE	6 already going
LEADS	

Join the Trip

INTERACTION DETAILS

Animate background image subtly on entry.

Join CTA has a tactile press state.

Show avatars with +N overflow.

Use social copy: “4 friends are already going.”

Do not expose admin controls on public invite.

Treat money like a product surface - clear, calm, slightly playful.

The expense view needs instant readability: how much was spent, what is mine, what I owe, and what I am owed.

06

A trip page should feel like a story you can edit.

Make the cover image and trip identity the visual anchor. Timeline content stays structured underneath.

ITINERARY

ADD ACTIVITY

**Make planning
feel effortless.**

One tap. No modal maze.

Two surfaces that should never look like CRUD tables.

Booking is proof + context. Settlement is a calm checklist with money movement made obvious.

Rules that prevent visual drift

This page belongs in the codebase next to the other product-resource PDFs. Treat it as non-negotiable design policy.

DO

1. Use the same warm palette everywhere.
2. Use rounded but not childish surfaces - 14 to 26px radius depending on scale.
3. Pair dark surfaces with cream/peach highlights.
4. Use photography/visual texture on feature pages.
5. Keep CTAs short and confident: Create, Join, Split, Settle, Share.
6. Use real microcopy that sounds social and modern.

DO NOT

1. Do not default to white cards on a white page.
2. Do not use blue as the universal accent.
3. Do not turn every action into a generic modal.
4. Do not make every screen look like analytics software.
5. Do not invent new accent colors.
6. Do not flatten the app into identical card grids.
