

BookKaroyar - Resource Index

Use these PDFs as implementation references for coding agents

Read 00-master-architecture.pdf first. Then use the module PDF that matches the feature being changed. When two PDFs conflict, the master architecture and security rules take precedence unless the project owner intentionally updates the source of truth.

Recommended order

Order	Resource	Purpose
0	00-master-architecture.pdf	Overall architecture and non-negotiable stack
1	01-authentication.pdf	Auth + user identity
2	02-app-shell-dashboard.pdf	Global UI shell + dashboard
3	03-groups-members.pdf	Groups and roles
4	04-invite-links.pdf	Shareable group links
5	05-plans-trips-itinerary.pdf	Plans + trips + itinerary
6	06-bookings.pdf	Booking records
7	07-expenses-splitting.pdf	Expense calculation
8	08-settlement-engine.pdf	Balances and settlement
9	09-polls-voting.pdf	Group voting
10	10-activity-notifications.pdf	Activity and notifications
11	11-firebase-data-security.pdf	Firestore schema + rules + trusted logic
12	12-ui-states-design-system.pdf	MUI system + UX states
13	13-testing-seeding-deployment.pdf	Seed, testing, deployment

Agent operating rules

- Before coding, identify which module PDF governs the requested change.
- Do not invent a new collection, route, role, or API if an existing contract already covers the use case.
- Do not silently replace JavaScript with TypeScript or React with Next.js.
- When a requirement is genuinely missing, add it as an explicit architecture change rather than hallucinating it.
- Keep Firebase permission checks in rules/backend, not only in the UI.
- After implementation, verify the module acceptance criteria and state matrix.
